Additional Notes:-

Petrol Cars

- A Road Tax** – A low rate of tax of £105 applies to engines up to 1549cc. For all new vehicles registered from the 1st March 2001 road tax is based on the CO₂ output of the engine and will vary between £100 to £155.
- B Insurance** - This is the average cost for a fully comprehensive policy with a 60% no claims discount.
- C Depreciation** - All cars will depreciate at different rates, depending on make, model, age, mileage, condition etc. It is therefore not possible to give an accurate figure for depreciation as this will depend on the new purchase price paid and whatever price is realised when the time comes to sell or replace the car. For the purposes of this publication an average annual depreciation figure is calculated and is based on the average cost of a new car within the various engine capacity groups. In the case of second-hand cars the depreciation should be assessed individually.
- D AA Membership Subscription including Relay**
- E Petrol** - Based on the average price of a litre of petrol at the time of publication. The cost per mile figure is calculated from what we consider to be a reasonable fuel consumption for the various engine groups.
- F Engine Oil** - Allowance is made for normal oil consumption and routine oil changes.
- G Tyres** - Estimated tyre life of 30,000 miles. This may vary depending on the individual driving style.
- H Servicing** - Routine servicing as recommended by the vehicle manufacturer. In the case of older motor cars the servicing costs may be more.
- I Repairs and Replacements** - An allowance is made for routine repairs and replacements which are likely to be needed due to normal wear and tear. However it is unrealistic for us to allow for any major repairs, which will only occur as a result of unexpected mechanical or electrical failures. For this reason only the owner of the vehicle can assess the true cost of this item, as repair costs will vary, even when comparing identical cars.
